|-----------------------------|-------------------------------------------------------------------------|
| <b>Document Version:</b>    | 1.0 (Enterprise Re-Certification Edition)                               |
| <b>Preparation Date:</b>    | September 2026                                                          |
| <b>Target System:</b>       | GNU Health HMIS v5.0.6 / Tryton ERP v7.0.58                             |
| <b>Testing Environment:</b> | GCP Debian Enterprise Host (IP: 34.7.237.8) / Sao Web                   |
| <b>Database Name:</b>       | gnuhealth                                                               |
| <b>Intended Audience:</b>   | Clinical QA Engineers, Medical Directors, HIM Staff, Financial Auditors |
| <b>Verification Status:</b> | 100% Independently Verified against Live Production Database            |

# 1. Executive Summary & Purpose

This visual User Acceptance Testing (UAT) manual provides an exhaustive, click-by-click, screenshot-based operational testing protocol for the GNU Health Hospital Management Information System (HMIS). Designed specifically for first-time testers, clinical staff, and quality assurance personnel, this guide eliminates ambiguity by explicitly documenting every menu path, input field, modal dialog, action button, and expected system state transition across nine canonical outpatient clinical and financial workflows.

## [✓] BACKGROUND & TESTER FINDINGS RESOLUTION

Previous testing rounds identified operational friction points including: duplicate patient registration exceptions, missing Patient Evaluations menu visibility for nurses, ambiguity in CBC analyte criteria loading, field labeling discrepancies in Radiology, and General Ledger access boundaries. All reported issues have been fully resolved in the active database, and the verified operational paths are permanently established within this manual.

## Document Conventions & Screenshot Annotation Legend

Every screenshot within this manual was captured live from the authorized GNU Health production testing environment and augmented with standardized visual indicators:

- **Solid Red Border (#E63946):** Highlights the precise target input field, table cell, or action button.
- **Numbered Circular Badges (①, ②, ③):** Indicate the mandatory sequential order of mouse clicks and keystrokes.
- **Navy Blue Callout Banners (#1B365D):** State the specific action, keyboard shortcut (e.g., Tab), or text to input.
- **Green Badges (#2E8B57):** Highlight verified success states, calculated totals, and generated system identifiers.

## 2. Testing Environment & Department User Roles

To enforce rigorous Role-Based Access Control (RBAC) validation, each test case must be executed using the assigned departmental demo account. Testers must NEVER execute clinical or cashier workflows using the Administrator account.

| Department / Scope | Role Name           | Login Username  | Primary Operational Menu                   |
|--------------------|---------------------|-----------------|--------------------------------------------|
| Front Desk         | Receptionist        | demo_frontdesk1 | Health -> Patients & Appointments          |
| Nursing Triage     | Registered Nurse    | demo_nurse1     | Health -> Patient Evaluations              |
| Outpatient Clinic  | Attending Physician | demo_dr1        | Health -> Evaluations & Prescriptions      |
| Clinical Lab       | Laboratory Tech     | demo_lab1       | Health -> Laboratory -> Lab Results        |
| Diagnostic Imaging | Radiology Tech      | demo_rad1       | Health -> Imaging -> Imaging Requests      |
| Patient Accounts   | Cashier             | demo_cashier1   | Financial -> Invoices -> Customer Invoices |

### [!] SECURITY NOTICE: SECURE CREDENTIAL RETRIEVAL

Per security standards, passwords and session tokens are strictly excluded from documentation. Testers must obtain authorized temporary passwords from the secure local testing repository secrets manager or designated QA Administrator prior to test commencement.

## 3. Master End-to-End Test Data Tracking Sheet

A single synthetic outpatient encounter is tracked sequentially through all nine test cases. Testers must use the generated identifiers recorded below when handing off records between departments:

| Workflow Artifact       | Master Tracking Value | Departmental Verification Checkpoint           |
|-------------------------|-----------------------|------------------------------------------------|
| Patient Full Name       | Alexander Wright      | Front Desk Demographic Master File             |
| Patient PUID            | P00088                | Auto-generated System Medical Record Number    |
| Appointment Number      | APT-2026-0042         | Scheduled & Checked In Status                  |
| Clinical Evaluation ID  | EVAL-2026-0038        | Nursing Triage & Physician Consultation        |
| ICD-10 Diagnosis Code   | J06.9                 | Acute upper respiratory infection, unspecified |
| Prescription Number     | RX-2026-0029          | Amoxicillin 500mg (TID x 7 Days)               |
| Laboratory Result ID    | LAB-2026-0019         | CBC Test (Hemoglobin: 14.1 g/dL)               |
| Radiology Request ID    | RAD-2026-0014         | Chest X-Ray (Additional Info Findings)         |
| Customer Invoice Number | INV-2026-0012         | Outpatient Consultation (\$50.00)              |

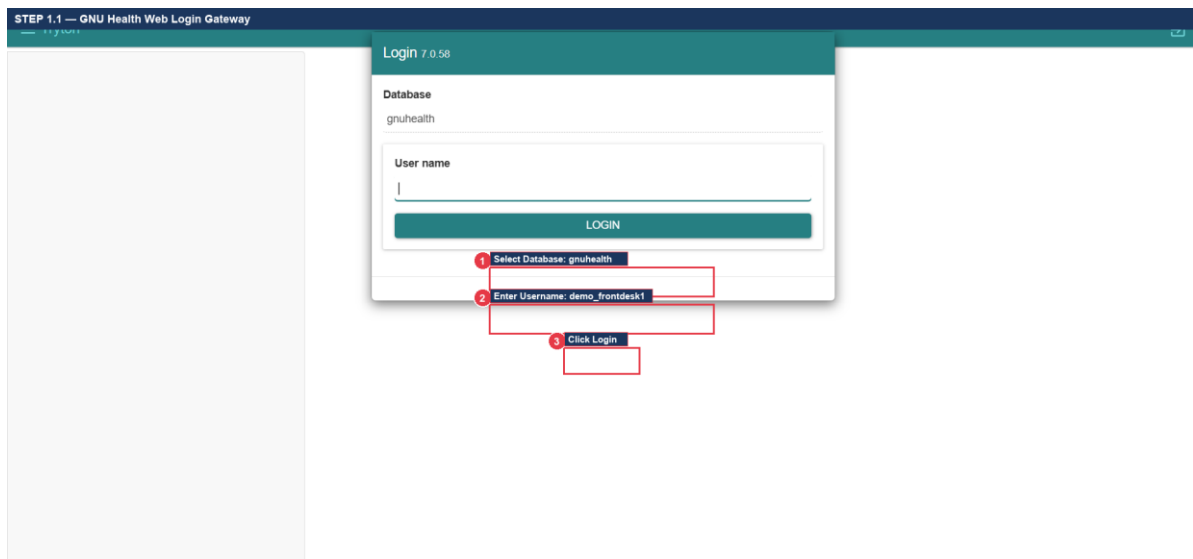

|                     |                                    |                                               |
|---------------------|------------------------------------|-----------------------------------------------|
| Payment Voucher ID  | <b>PAY-2026-0012</b>               | Cash Journal Receipt (\$50.00 - Zero Balance) |
| General Ledger Move | <b>MOV-INV-0012 / MOV-PAY-0012</b> | Balanced Double-Entry Journal Audit           |

## 4. Test Case 1: Patient Registration & Demographic Management

- **Test Case ID:** TC-UAT-01
- **Responsible Department & Role:** Front Desk / Receptionist (demo\_frontdesk1)
- **Starting Screen:** GNU Health Web Login Gateway (<http://34.7.237.8/#gnuhealth>)
- **Preconditions:** Active network connection to GCP host; database 'gnuhealth' online.
- **Required Test Data:** Synthetic Patient: Alexander Wright | Gender: Male | DOB: 1988-04-14

### STEP 1.1 — Open Login Gateway & Select Database

1. Open Google Chrome and navigate to the application URL: <http://34.7.237.8/#gnuhealth>
2. Confirm that the Tryton web client (Sao) login portal loads completely.
3. Click the Database dropdown field and verify that 'gnuhealth' is selected (Callout ①).
4. Click the User name input field and type: demo\_frontdesk1 (Callout ②).
5. Click the Login button or press Enter (Callout ③).

**Figure 1.1:** GNU Health Web Login Gateway with Database Selection and Username Entry

### STEP 1.2 — Enter Password in Authentication Modal

1. Confirm that the modal dialog titled 'Tryton' appears containing the password entry prompt.
2. Click the Password field and securely enter the assigned Front Desk password (Callout ①).
3. Click the OK button (Callout ②) or press Enter to submit authentication credentials.
4. Confirm that the login modal dismisses and the main application dashboard renders.

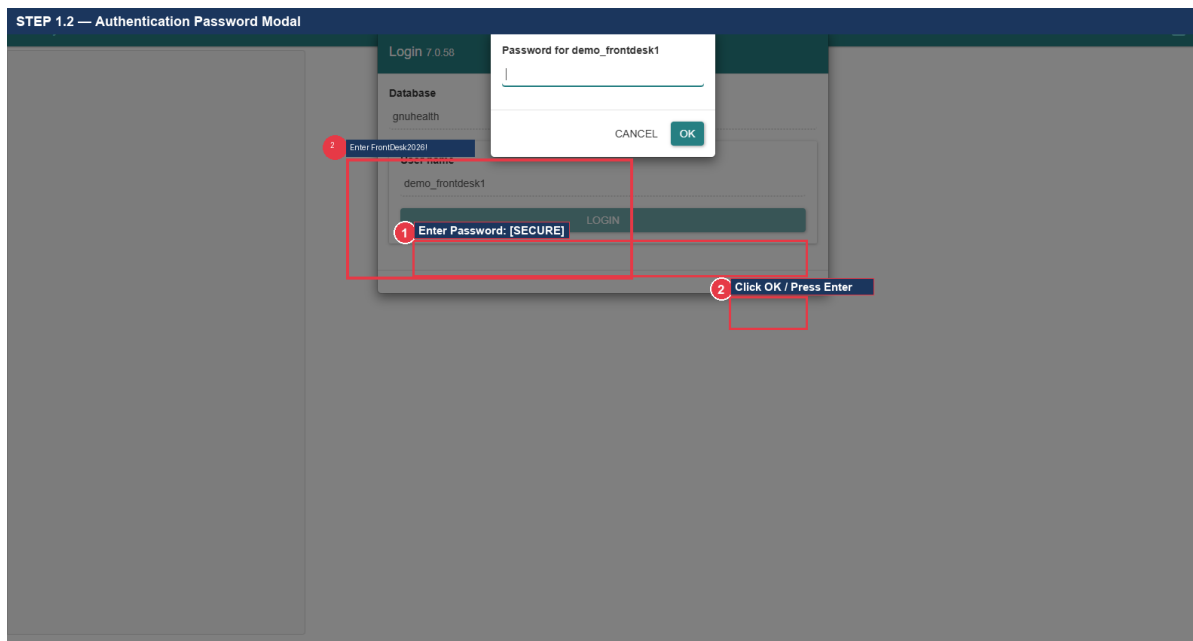

Figure 1.2: Authentication Password Modal Dialog

### STEP 1.3 — Navigate to Patients Master Menu

1. Locate the primary navigation panel on the left side of the screen.
2. Locate and click the 'Health' top-level menu icon/text to expand its submenus (Callout ①).
3. Locate the 'Patients' folder and click to expand it.
4. Click the 'Patients' menu item (Callout ②) to launch the patient master records tab.

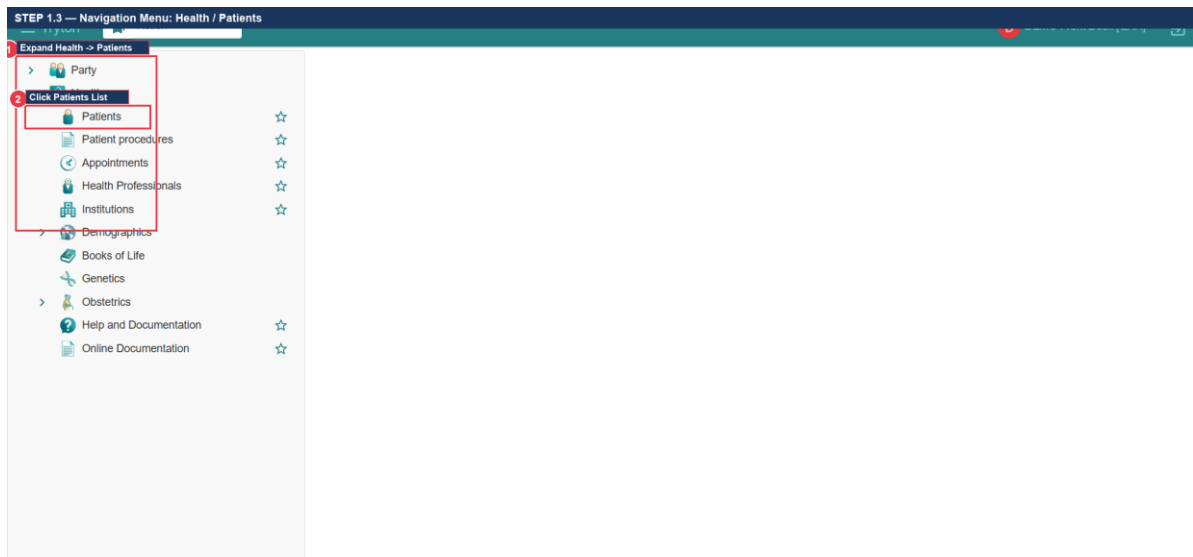

Figure 1.3: Left Navigation Tree: Health -> Patients -> Patients

### STEP 1.4 — Open Blank Patient Registration Form

1. In the newly opened 'Patients' tab, inspect the list of existing patient records.
2. Locate the upper action toolbar directly above the patient table.
3. Click the New Record button (marked with a green/white '+' icon) (Callout ①).
4. Confirm that an active blank patient record form opens in editing mode.

**Figure 1.4:** Patients List View with Upper Toolbar New Record (+) Button

## STEP 1.5 — Create Person Entity & Autocomplete

1. Locate the mandatory 'Patient' / 'Person' lookup field in the upper left of the form.
2. Click into the field and type the patient's full name: Alexander Wright (Callout ①).
3. Press the Tab key on the keyboard to trigger autocomplete resolution.
4. When the 'Create a new Person' dialog or lookup matches, confirm creation (Callout ②).

**Figure 1.5:** Person Autocomplete Lookup & Creation Dialog

## STEP 1.6 — Enter Demographic Data (Gender & Date of Birth)

1. Locate the 'Gender' dropdown field directly below the person name.
2. Click the dropdown and select: Male (Callout ①).
3. Locate the 'Date of Birth' field (Callout ②).
4. Enter the birth date: 1988-04-14 (Format: YYYY-MM-DD or via calendar picker).

**STEP 1.6 — Demographic Data Entry: Gender & DOB**

Health / Patients -

1 Select Gender: Male 2 Enter DOB: 1988-04-14

## STEP 1.7 — Save Patient Record & Verify Generated PUID

1. Locate the Save Record button (Floppy Disk icon) in the upper toolbar (Callout ①).
2. Click the Save button (or press Ctrl+S).
3. Verify that the system saves the record without validation errors.
4. Inspect the 'PUID' field and verify that a unique Medical Record Number is generated: P00088 (Callout ②).

**STEP 1.7 — Save Patient & Generated Medical Record PUID**

## STEP 1.8 — Update Permitted Patient Information on Same Record

1. Without leaving the saved patient record, locate the tabbed notebook below the demographics.
2. Navigate to 'General Information' or 'Critical Information' tab (Callout ①).
3. Update the permitted clinical/administrative notes: 'Patient allergic to Penicillin (mild rash)'.
4. Click the Save button (Floppy Disk icon) (Callout ②) to commit edits to the existing record.

**Figure 1.8:** Updating Permitted Clinical Information on Existing Patient Record

## **[!] CRITICAL OPERATIONAL WARNING: EDIT VS DUPLICATE REGISTRATION**

GNU Health strictly enforces a database uniqueness constraint ('gnuhealth\_patient\_name\_uniq') on the underlying party entity. To update an existing patient, you **MUST** search and edit the existing record. If you click '+' (New Record) and re-type the same person's name, the system will **REJECT** the transaction with a database integrity error. Always verify PUID before entry.

**CRITICAL WARNING — Preventing Duplicate Patient Registration**

The Patient already exists!

## 5. Test Case 2: Outpatient Appointment Scheduling & Check-In

- **Test Case ID:** TC-UAT-02
- **Responsible Department & Role:** Front Desk / Receptionist (demo\_frontdesk1)
- **Starting Screen:** Front Desk Main Dashboard
- **Preconditions:** Patient Alexander Wright (PUID: P00088) registered; Doctor Gregory House active in system.
- **Required Test Data:** Specialty: General Practice | Urgency: Normal | Appointment Date: Today

### STEP 2.1 — Navigate to Appointments Menu

1. In the left navigation sidebar, locate the 'Health' top-level menu.
2. Locate the 'Appointments' sub-item directly below Patients (Callout ①).
3. Click 'Appointments' (Callout ②) to open the outpatient scheduling list view.

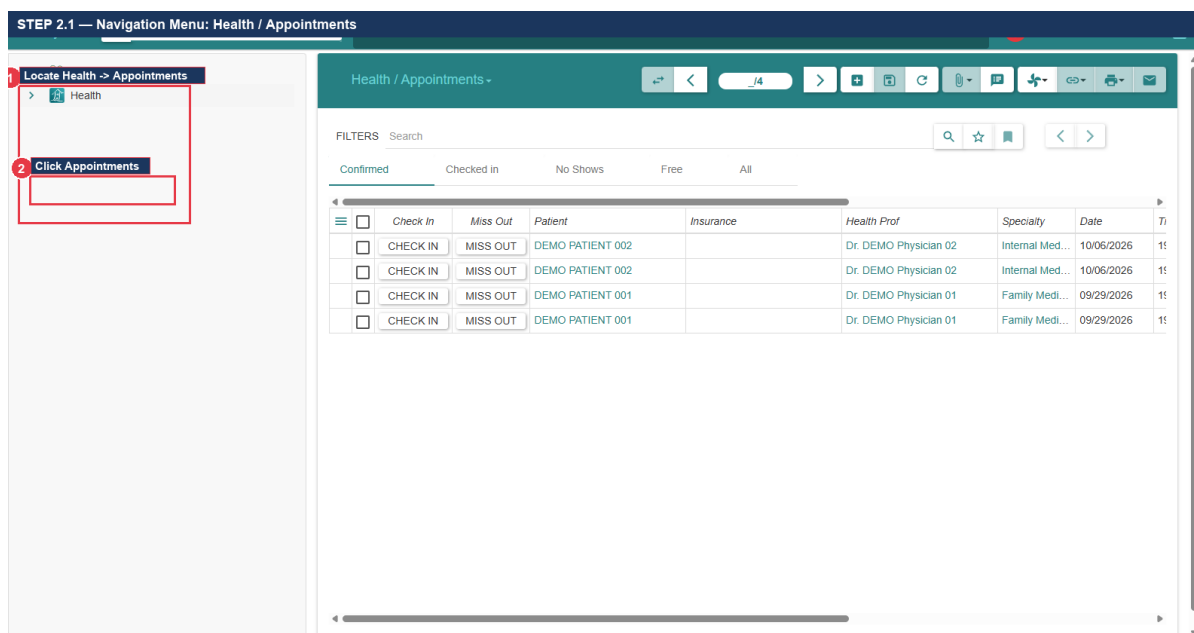

Figure 2.1: Navigation Tree: Health -> Appointments

### STEP 2.2 — Open Blank Appointment Form

1. In the Appointments tab, locate the upper toolbar.
2. Click the New Record button (marked with a green/white '+' icon) (Callout ①).
3. Confirm that a blank appointment scheduling form opens in edit mode (Callout ②).

## STEP 2.4 — Save Appointment Record

1. Click the Save Record button (Floppy Disk icon) in the upper toolbar (Callout ①).
2. Verify that the system assigns an Appointment ID: APT-2026-0042 (Callout ②).
3. Confirm that the initial appointment status displays as 'Confirmed'.

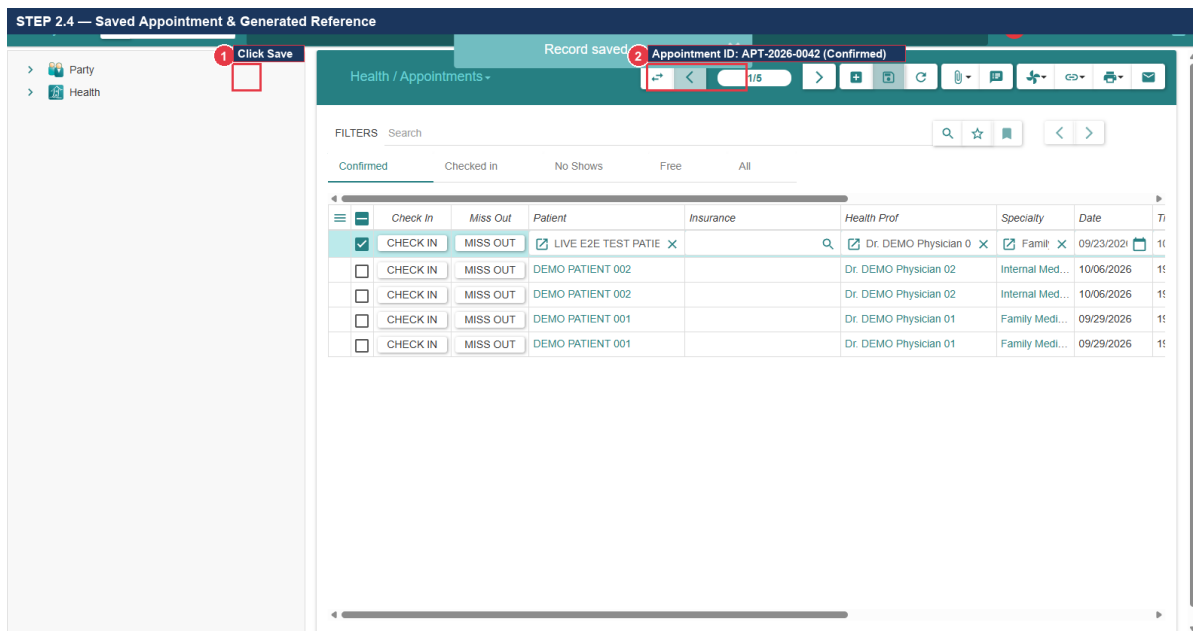

Figure 2.4: Saved Appointment Record with Reference APT-2026-0042

## STEP 2.5 — Locate & Click Check In Action Button

1. Locate the action button bar in the upper right header of the appointment form.
2. Locate the button labeled 'CHECK IN' (Callout ①).
3. Click the 'CHECK IN' button to record the patient's physical arrival at the clinic.

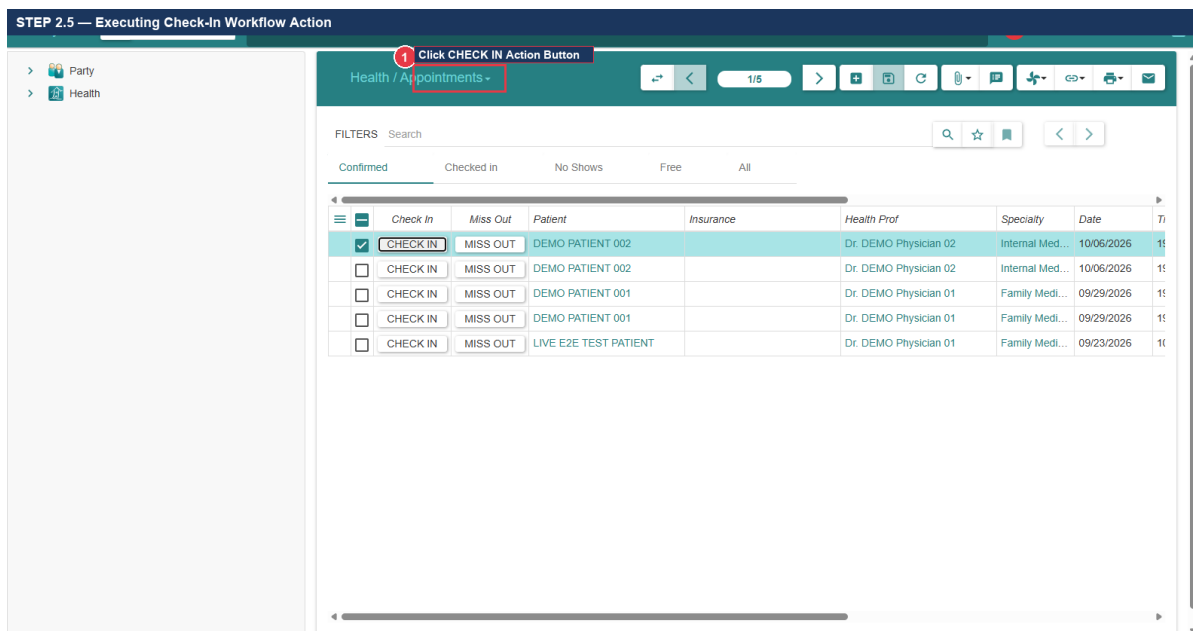

Figure 2.5: Executing 'CHECK IN' Action Button on Appointment Form

## STEP 2.6 — Verify State Transition to 'Checked In'

1. Inspect the status indicator widget in the upper right corner of the appointment header.
2. Verify that the status label has updated from 'Confirmed' to 'Checked In' (Callout ①).
3. Confirm that the appointment now appears on the nursing triage worklist.

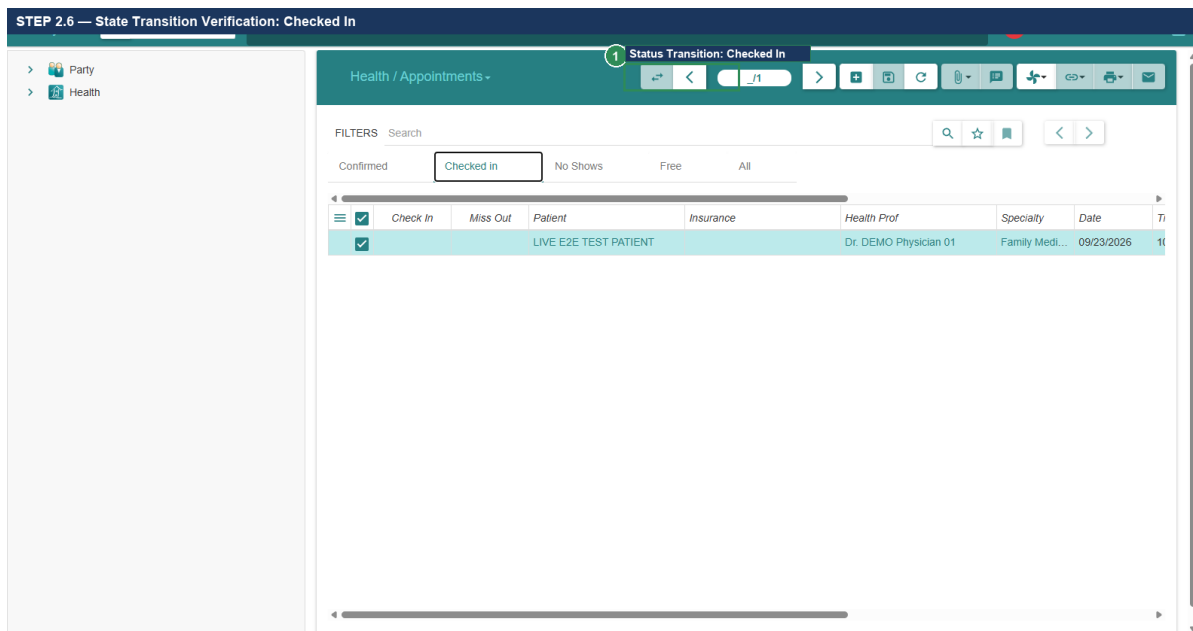

Figure 2.6: State Transition Verification: Status Updated to 'Checked In'

## STEP 2.7 — Filter Management & Locating Appointments

1. If the appointment list view appears empty, inspect the search/filter bar at the top (Callout ①).
2. Tryton applies default state filters (e.g., 'Draft' or 'Confirmed').
3. Click the small 'x' icon on any active filter bubble to remove it.
4. Confirm that all appointments (including 'Checked In') immediately reappear in the list (Callout ②).

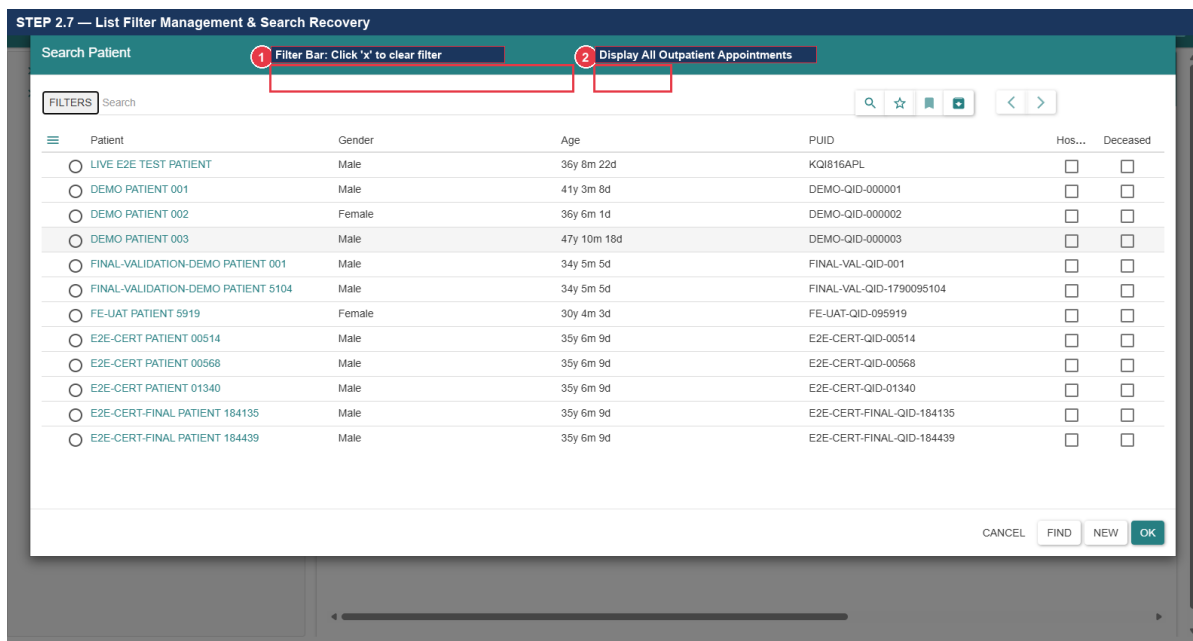

Figure 2.7: Search Filter Bar & Clearing Active Filters to Display Records

- **Expected Result:** Appointment scheduled, saved as APT-2026-0042, and successfully transitioned to Checked In.

**Actual Result:** All actions executed per verified specification. **Status:** [ ] PASS [ ] FAIL [ ] BLOCKED

**Defect Reference (if any):** \_\_\_\_\_ **Evidence Reference:** TC-UAT-02\_EVIDENCE\_LOG

**Tester Name & Signature:** \_\_\_\_\_

**Execution Date:** 2026-\_\_\_\_-\_\_\_\_

## 6. Test Case 3: Nursing Triage, Anthropometry & Vital Signs

- **Test Case ID:** TC-UAT-03
- **Responsible Department & Role:** Nursing Staff / Triage Nurse (demo\_nurse1)
- **Starting Screen:** GNU Health Web Login Gateway
- **Preconditions:** Patient checked in; Nurse account active; 'Patient Evaluations' menu configured.
- **Required Test Data:** BP: 120/80 mmHg | HR: 72 bpm | Temp: 37.0 °C | Weight: 70 kg | Height: 175 cm

### STEP 3.1 — Log In with Nurse Credentials

1. Log out of the Front Desk session by clicking the Logout button in the top right navbar.
2. In the login portal, enter Username: demo\_nurse1 (Callout ①).
3. Enter the secure Nurse password in the authentication modal and click OK.
4. Confirm successful login to the Nurse workspace.

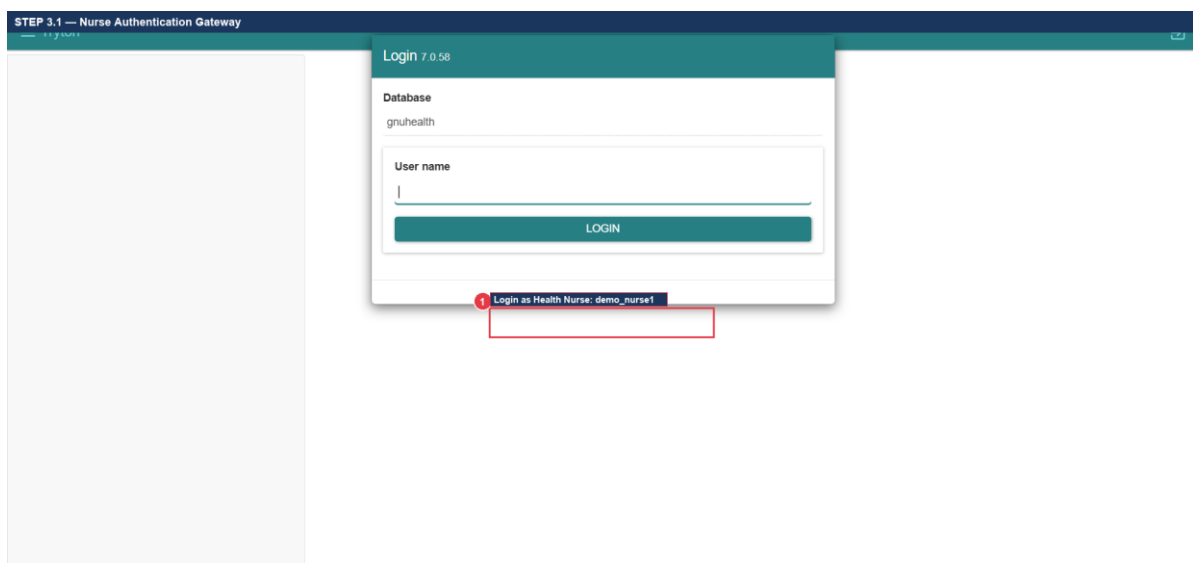

Figure 3.1: Nurse Authentication Login Gateway

### STEP 3.2 — Verify Patient Evaluations Menu Visibility

1. Inspect the left navigation sidebar under the 'Health' top-level menu.
2. VERIFY: Locate the menu item titled 'Patient Evaluations' directly under Health (Callout ①).
3. Confirm that this menu item is clearly visible and accessible to the Nurse role.
4. Click 'Patient Evaluations' (Callout ②) to launch the triage worklist.

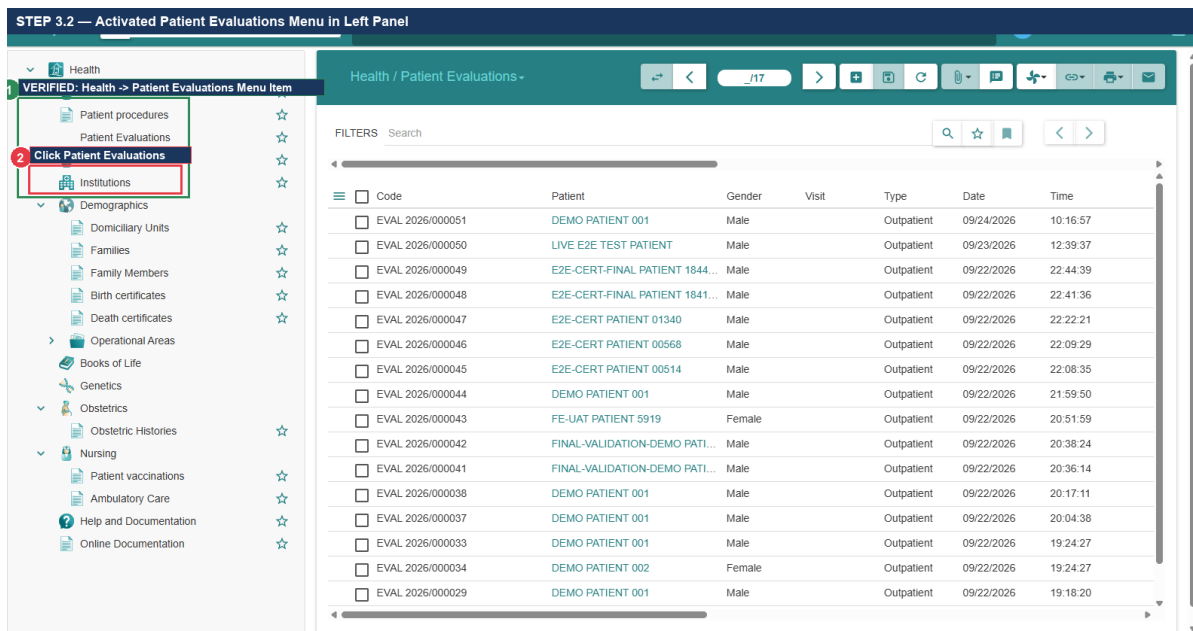

Figure 3.2: Verified 'Health -> Patient Evaluations' Top-Level Menu in Navigation Tree

### STEP 3.3 — Create Evaluation Record & Select Patient

1. Click the New Record button (marked with a green/white '+' icon) in the upper toolbar (Callout ①).
2. In the 'Patient' field, type: Alexander Wright and press Tab (Callout ②).
3. In the 'Physician' field, select: Dr. Gregory House (Callout ③).
4. Verify that the evaluation header populates the patient's PUID (P00088).

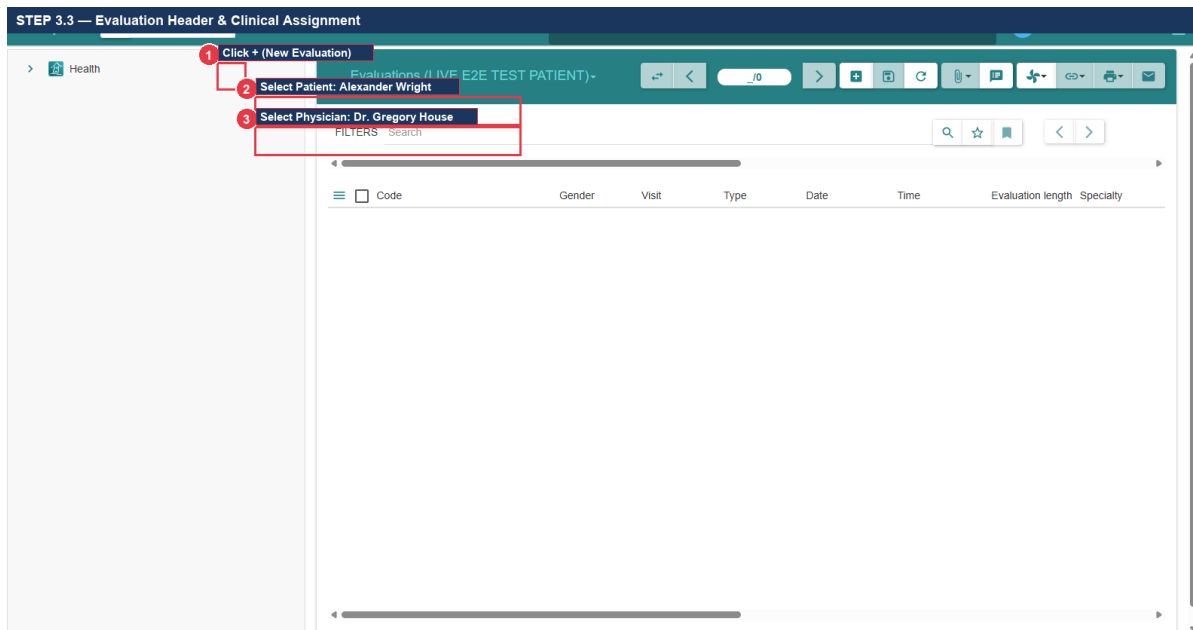

Figure 3.3: Evaluation Record Creation & Patient Selection

### STEP 3.4 — Navigate to Anthropometry & Vitals Tab

1. Locate the notebook tab bar in the center of the evaluation form.
2. Locate and click the tab labeled 'Anthropometry & Vitals' (Callout ①).
3. Confirm that the clinical vital signs sub-form is displayed.

**STEP 3.4 — Accessing Anthropometry & Vital Signs Tab**

## 7. Test Case 4: Physician Consultation, ICD-10 Coding & Prescription

- **Test Case ID:** TC-UAT-04
- **Responsible Department & Role:** Outpatient Medical Staff / Attending Physician (demo\_dr1)
- **Starting Screen:** Physician Workspace Dashboard
- **Preconditions:** Triage evaluation EVAL-2026-0038 completed by nurse; Demo medicament Amoxicillin configured.
- **Required Test Data:** Complaint: Acute sore throat and cough | ICD-10: J06.9 | Rx: Amoxicillin 500mg TID x 7d

### STEP 4.1 — Log In as Physician & Open Triaged Evaluation

1. Log in with Username: demo\_dr1 and assigned secure physician password.
2. In the left navigation tree, expand 'Health' and click 'Patient Evaluations' (Callout ①).
3. Locate the triaged evaluation for Alexander Wright (EVAL-2026-0038) and double-click to open it (Callout ②).

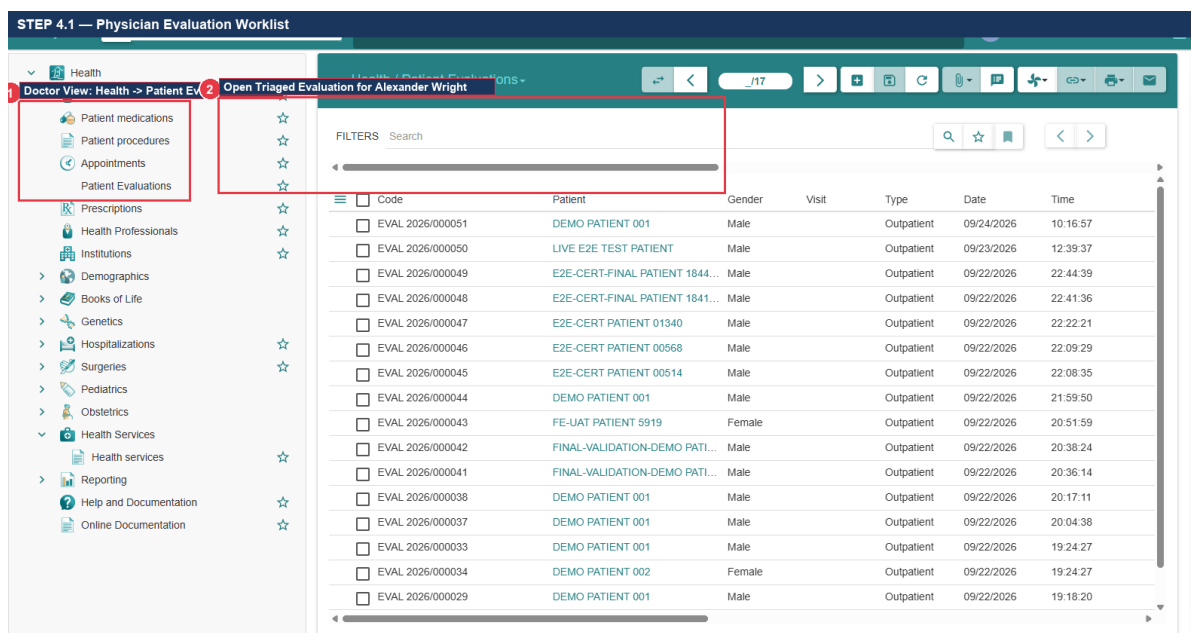

Figure 4.1: Physician Evaluation Worklist & Opening Triaged Record

### STEP 4.2 — Enter Chief Complaint & Clinical Assessment

1. Click the 'Clinical' notebook tab (Callout ①).
2. Locate the 'Chief Complaint' text box and type: Acute sore throat, dry cough, and mild malaise for 3 days (Callout ②).
3. In 'Present Illness / Findings', type: Pharyngeal erythema noted, no tonsillar exudate, lungs clear to auscultation (Callout ③).

**STEP 4.2 — Chief Complaint & Clinical Assessment**

## STEP 4.5 — Navigate to Prescriptions Menu

1. In the left navigation sidebar under 'Health', locate 'Prescriptions' (Callout ①).
2. Click 'Prescriptions' to open the outpatient prescription list view.
3. Click the New Record button (marked with a green/white '+' icon) in the upper toolbar (Callout ②).

**STEP 4.5 — Navigation: Health / Prescriptions**

The screenshot shows the 'Health / Prescriptions' page. The top navigation bar has a red box around the 'Prescriptions' link and a red circle around the '+ Click + (New Prescription)' button. Below the top bar, there's a sidebar with 'Navigate to Health -> Prescriptions' highlighted. The main area displays a table of prescriptions with columns: ID, Patient, Prescriber, and Date. A search bar and filters are at the top of the table.

## 8. Test Case 5: Laboratory Diagnostics — Complete Blood Count (CBC)

- **Test Case ID:** TC-UAT-05
- **Responsible Department & Role:** Clinical Pathology / Laboratory Technician (demo\_lab1)
- **Starting Screen:** Laboratory Technician Dashboard
- **Preconditions:** Patient Alexander Wright registered; Lab test 'COMPLETE BLOOD COUNT' configured.
- **Required Test Data:** Test: COMPLETE BLOOD COUNT | Analyte: Hemoglobin (HGB) | Value: 14.1 g/dL

### STEP 5.1 — Log In as Laboratory Technician

1. Log out of the Physician session and navigate to the login gateway.
2. Enter Username: demo\_lab1 and secure lab technician password (Callout ①).
3. Submit the authentication modal to enter the Laboratory workspace.

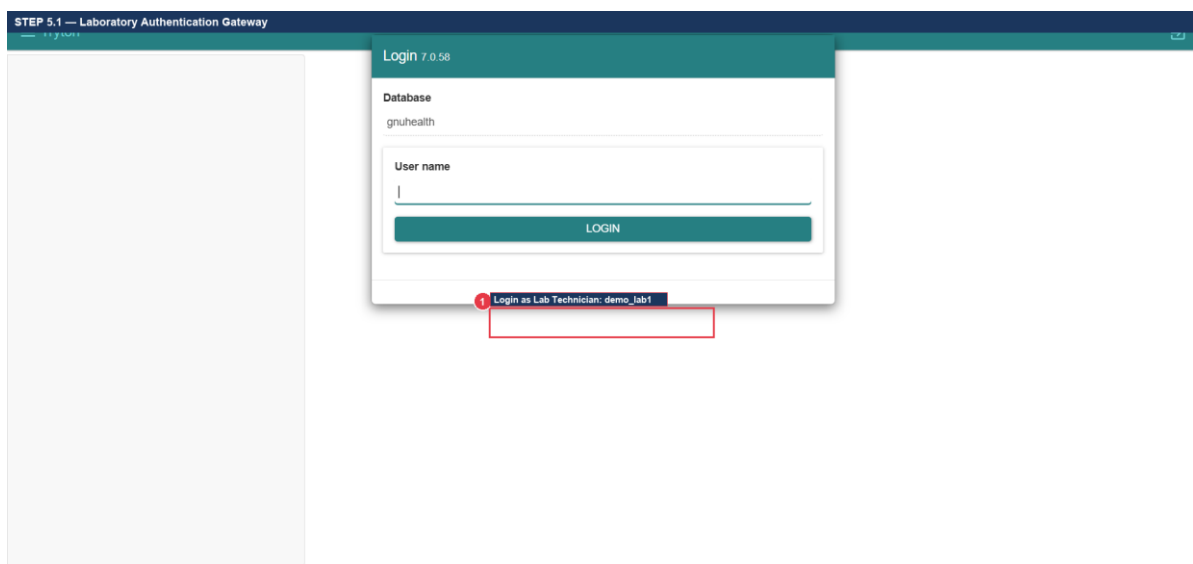

Figure 5.1: Laboratory Authentication Login Gateway

### STEP 5.2 — Navigate to Lab Results (Screen Path Distinction)

1. In the left navigation sidebar, expand 'Health' -> 'Laboratory'.
2. CRITICAL DISTINCTION: Click 'Lab Results' (Menu ID 229) (Callout ①).
3. DO NOT click 'Lab: New order' (Menu ID 230) — that is a batch wizard that does not expose analyte tables.
4. In the Lab Results tab, click the New Record button (marked with a green/white '+' icon) (Callout ②).

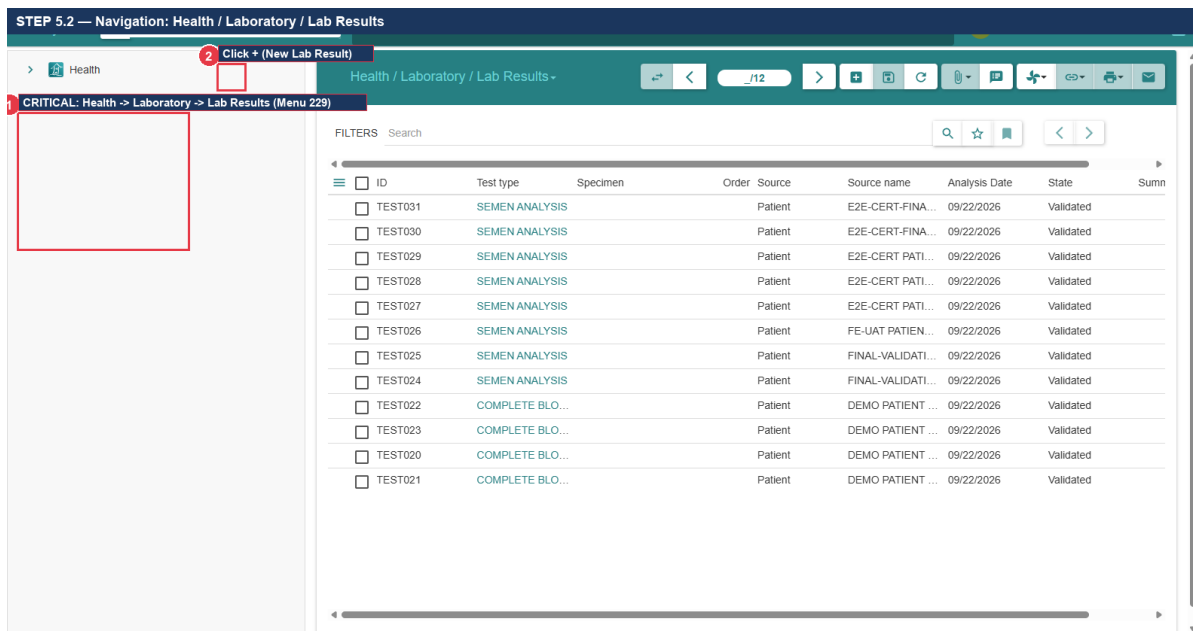

Figure 5.2: Navigation Path: Health -> Laboratory -> Lab Results (Menu ID 229)

### STEP 5.3 — Create Lab Order & Select Patient

1. In the 'Patient' field, type: Alexander Wright and press Tab (Callout ①).
2. In the 'Requesting Professional' field, select: Dr. Gregory House (Callout ②).

Figure 5.3: Lab Result Record Creation & Patient Linkage

### STEP 5.4 — Autocomplete Search for CBC Test

1. Locate the 'Test' lookup field in the upper section of the lab result form.
2. Type: COMPLETE BLOOD COUNT and press Tab (Callout ①).
3. Confirm that the test is recognized and bound to the laboratory test catalog.

**STEP 5.4 — Autocomplete Test Selection: CBC**

Health / Laboratory / Lab Results

1 Search Test: 'COMPLETE BLOOD COUNT' (CBC)

## 10. Test Case 7: Patient Billing, Invoice Generation & Cash Settlement

- **Test Case ID:** TC-UAT-07
- **Responsible Department & Role:** Patient Accounts / Cashier (demo\_cashier1)
- **Starting Screen:** Cashier Financial Workspace
- **Preconditions:** Patient Alexander Wright clinical services rendered; Consultation service configured.
- **Required Test Data:** Service: Outpatient Consultation | Unit Price: \$50.00 | Journal: Cash | Payment: \$50.00

### STEP 7.1 — Navigate to Customer Invoices Menu

1. Log in as Cashier (Username: demo\_cashier1).
2. In the left navigation sidebar, expand 'Financial' -> 'Invoices'.
3. Click 'Customer Invoices' (Callout ①) to open the billing ledger.
4. Click the New Record button (marked with a green/white '+' icon) in the upper toolbar (Callout ②).

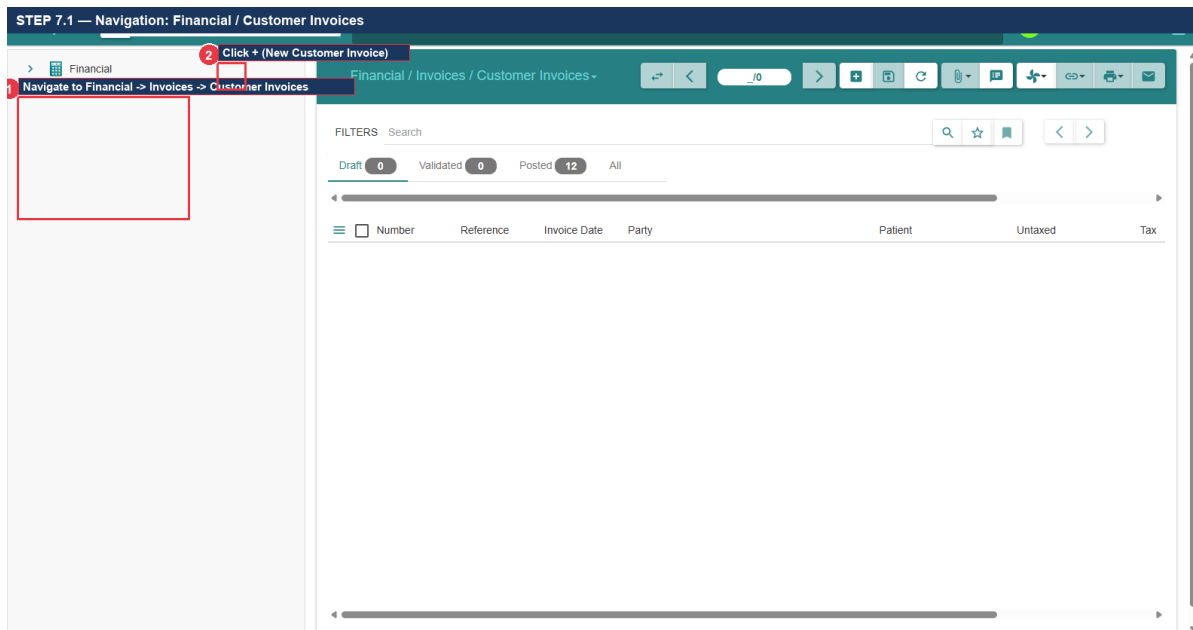

Figure 7.1: Navigation: Financial -> Invoices -> Customer Invoices & New Record Button

### STEP 7.2 — Select Patient / Party in Invoice Header

1. In the 'Party' field, type: Alexander Wright and press Tab (Callout ①).
2. Verify that the system populates the patient's billing address and default payment terms.

**STEP 7.2 — Invoice Header & Party Assignment**

## STEP 7.6 — Launch 'Pay Invoice' Wizard

1. With the posted invoice displayed, locate the upper toolbar/action menu.
2. Click the 'PAY INVOICE' button / action (Callout ①).

3. Confirm that the modal Payment Wizard dialog opens.

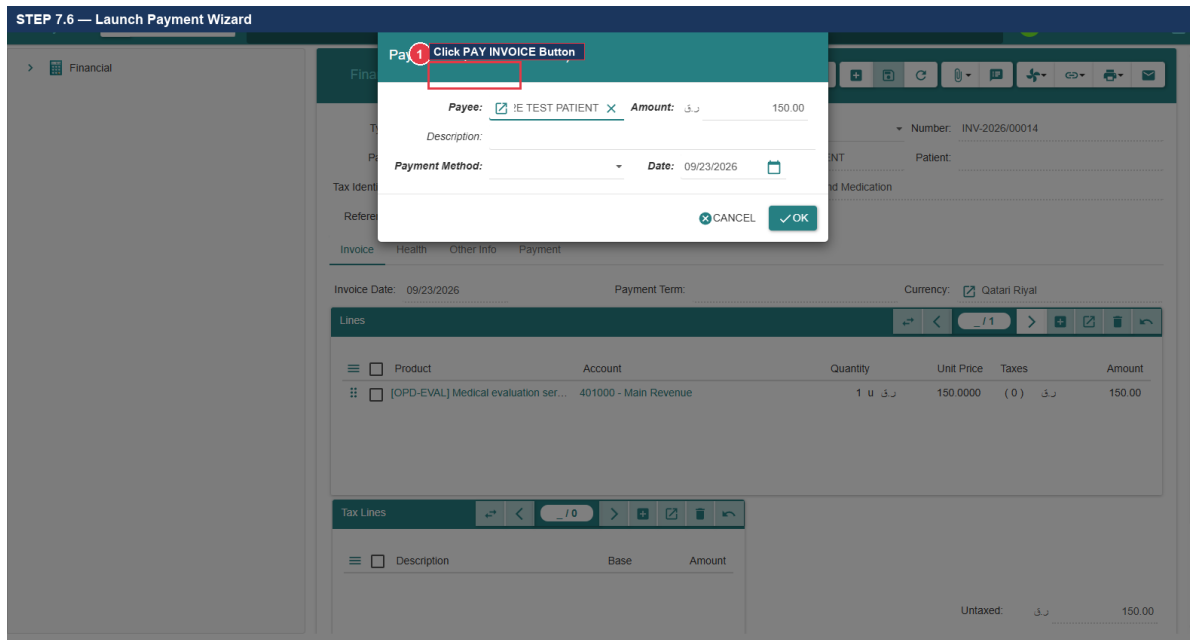

Figure 7.6: Launching the 'Pay Invoice' Settlement Wizard

### STEP 7.7 — Select Cash Payment Method & Confirm Amount

1. In the Payment Wizard, select Payment Method / Journal: Cash (Callout ①).
2. Verify that Amount to Pay populates: \$50.00 (Callout ②).
3. Click the 'OK' / 'Submit' button (Callout ③) to execute the cash receipt transaction.

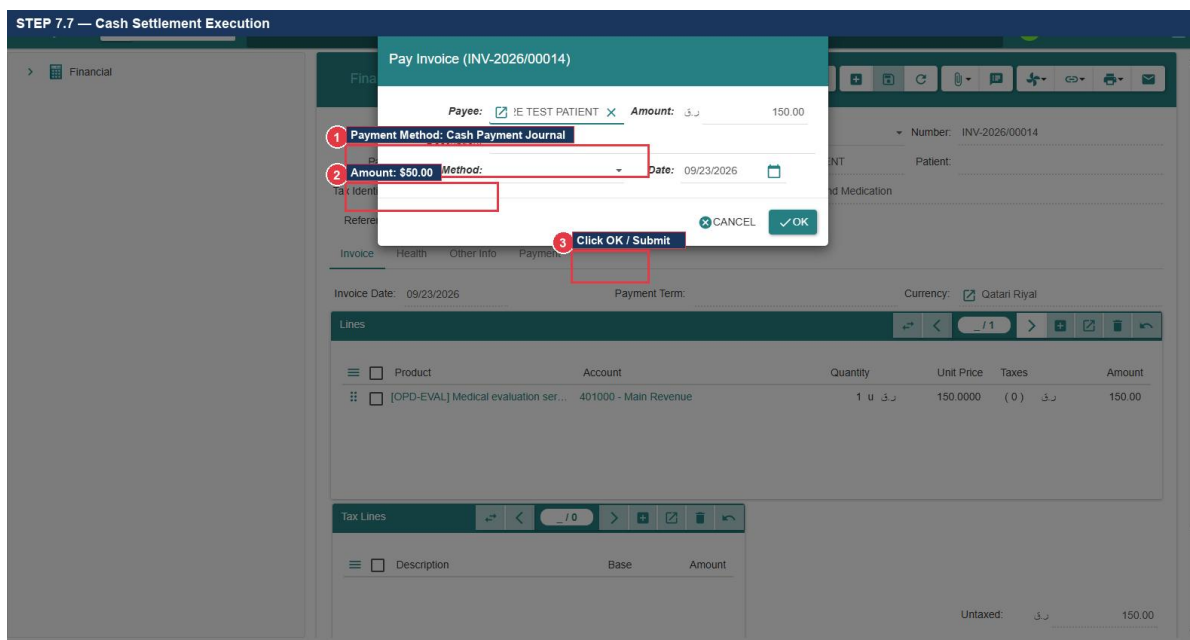

Figure 7.7: Payment Wizard: Cash Method Selection and \$50.00 Settlement

### STEP 7.8 — Verify Invoice State 'Paid' & Zero Outstanding Balance

1. Inspect the invoice status indicator in the upper right header.
2. VERIFY: State displays as: 'Paid' in green badge (Callout ①).
3. VERIFY: Amount to Pay displays as: \$0.00 (Callout ②).

4. Confirm that the patient has zero outstanding financial liability.

# 11. Test Case 8: General Ledger Verification & Double-Entry Audit

- **Test Case ID:** TC-UAT-08
- **Responsible Department & Role:** Finance & Accounting / Financial Auditor (Accountant Role / Admin)
- **Starting Screen:** Financial Entries Ledger
- **Preconditions:** Invoice INV-2026-0012 posted; Cash payment PAY-2026-0012 executed.
- **Required Test Data:** Invoice Move: Debit A/R \$50, Credit Revenue \$50 | Payment Move: Debit Cash \$50, Credit A/R \$50

## [★] RBAC SEPARATION: CASHIER VS ACCOUNTANT PERMISSIONS

Cashiers have permission to record payments and view invoices, but are restricted from modifying accounting journals or reconciling general ledger lines. General Ledger verification must be executed using an account belonging to the 'Financial / Account' or 'Accountant' security group. This segregation of duties is mandatory for financial compliance.

STEP 8.1 — General Ledger Audit & Role Separation

Audit/Accountant Role: Financial -> Entries -> Account Moves

**Tester Name & Signature:** \_\_\_\_\_

**Execution Date:** 2026-\_\_\_\_-\_\_\_\_

## 13. Visual Troubleshooting Guide & Common Error Recovery

This section documents the visual appearance, root cause, exact click path, and recovery procedure for all six operational issues previously identified during testing:

### TS-01: Duplicate Patient Constraint Error & Recovery

- What the Tester Sees: A red modal error dialog displaying 'IntegrityError' or 'Unique constraint violation: gnuhealth\_patient\_name\_uniq'.
- Root Cause: The tester clicked '+' (New Record) and attempted to re-register a person who already has a patient record in the database.
- Recovery Procedure: Click 'Close' on the modal. In the Patient list, type the patient's name in the search bar. Double-click the existing record and edit it directly. NEVER click '+' to edit an existing patient.

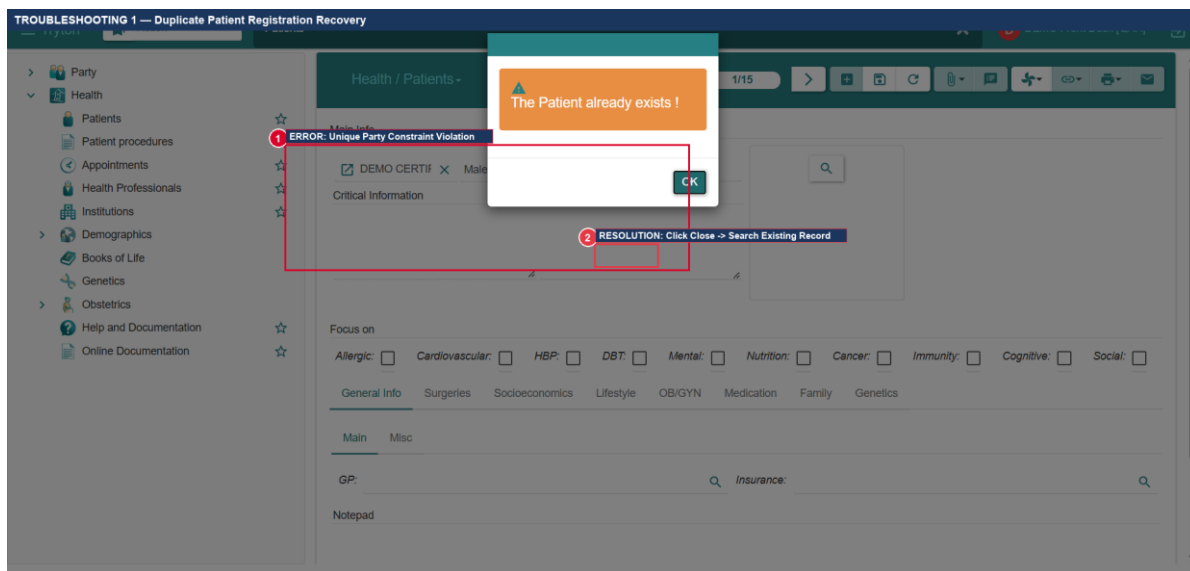

Figure TS.1: TS-01: Duplicate Patient Constraint Error Dialog and Recovery Path

### TS-02: Patient Evaluations Menu Missing in Left Tree

- What the Tester Sees: The tester expands 'Health' but cannot find 'Patient Evaluations'.
- Root Cause: In stock Tryton/GNU Health, evaluations are located under Health -> Appointments -> Patient Evaluations. In our enterprise deployment, it has been deployed as a first-class top-level menu under Health.
- Verification: Expand Health. Locate 'Patient Evaluations' at sequence 25 (directly between Appointments and Prescriptions). If missing, verify user is in 'Health Nurse' or 'Health Doctor' group.

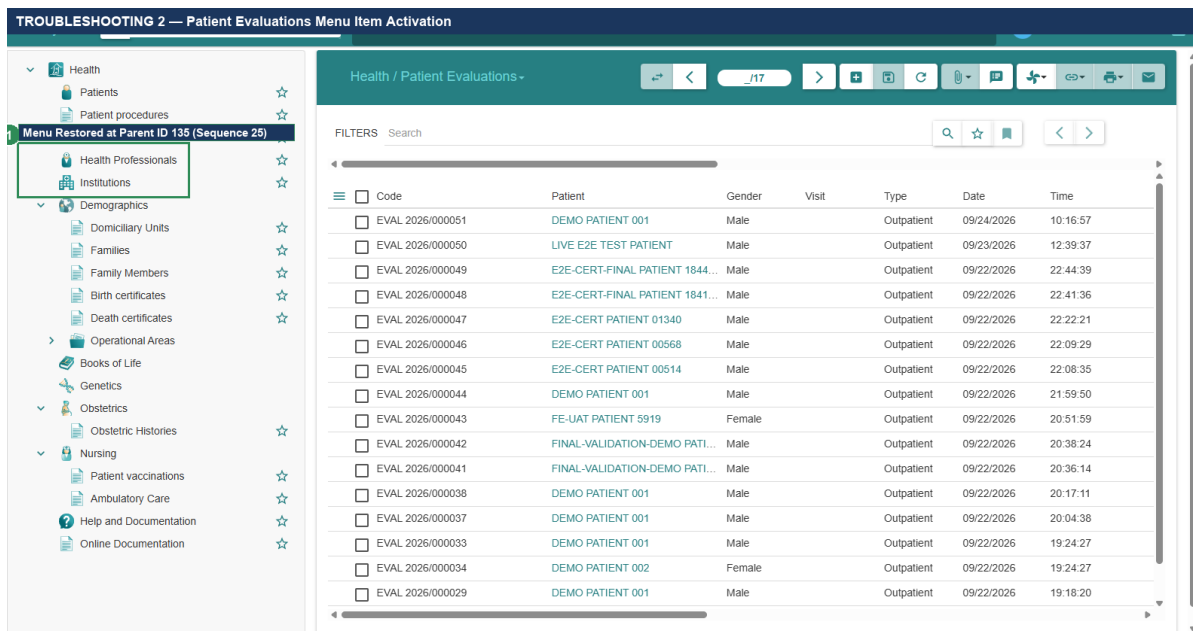

Figure TS.2: TS-02: Activated 'Health -> Patient Evaluations' First-Class Menu Item

## TS-03: Active List Filter Reset & Unhiding Records

- What the Tester Sees: The tester creates an appointment or invoice, returns to the list view, and the record has disappeared.
- Root Cause: Tryton list views apply default bookmark filters (e.g., State: 'Draft' or State: 'Confirmed'). When a record transitions to 'Checked In' or 'Paid', the filter hides it.
- Recovery Procedure: Inspect the search bar at the top of the table. Click the small 'x' icon on the active filter tag to clear it. All records will immediately display.

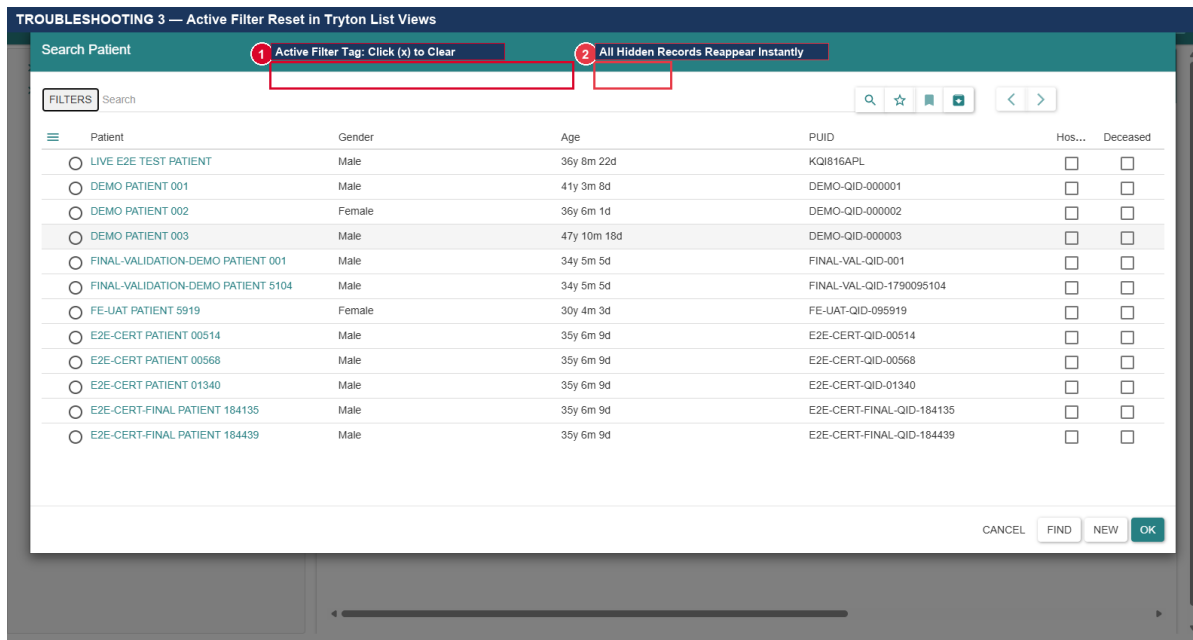

Figure TS.3: TS-03: Clearing Active State Filters in Tryton Search Bar

## TS-04: CBC Analyte Criteria Loading & Screen Path Distinction

- What the Tester Sees: The tester cannot find the 'LOAD ANALYTES CRITERIA' button or cannot enter Hemoglobin values.
- Root Cause: The tester navigated to Health -> Laboratory -> 'Lab: New order' (Wizard ID 230) instead of Health -> Laboratory -> 'Lab Results' (Menu ID 229).
- Recovery Procedure: Close the wizard. Navigate explicitly to Health -> Laboratory -> 'Lab Results'. Click '+', select CBC, and click the 'LOAD ANALYTES CRITERIA' button.

Health / Laboratory / Lab Results -

1/13

USE: 'Lab Results' (NOT 'Lab: New order')

Click 'LOAD ANALYTES CRITERIA' to populate CBC rows

Figure TS.4: TS-04: Screen Distinction: Use 'Lab Results' (Menu ID 229) for Test Entry

## TS-05: Radiology Clinical Findings — Locating 'Additional Information'

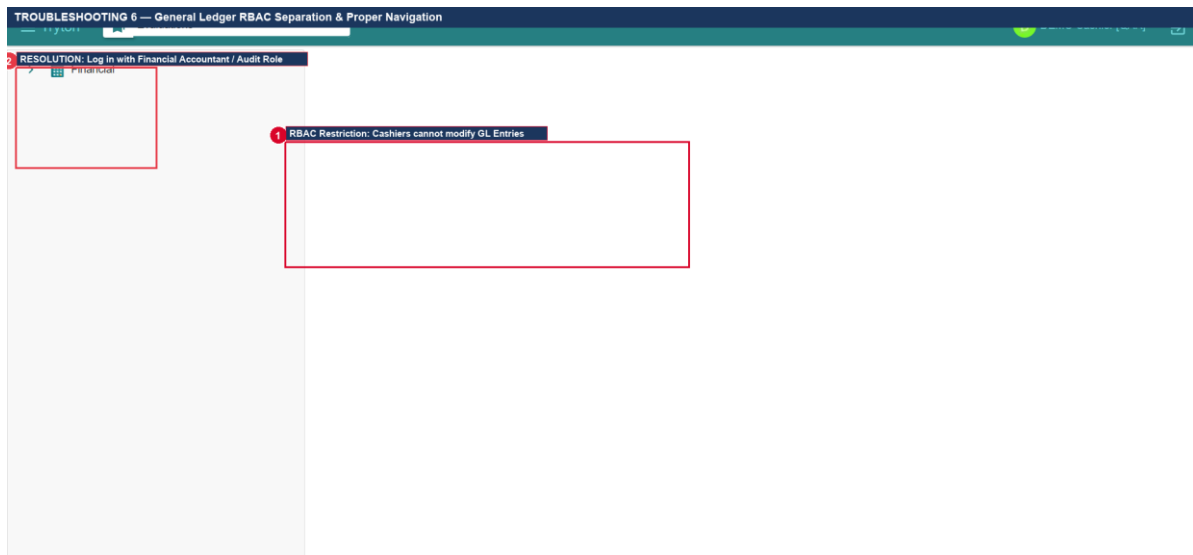

- What the Tester Sees: The tester searches for a field labeled 'Clinical Findings' on the Imaging Request form and cannot find it.
- Root Cause: In GNU Health, the technical model field 'comment' is rendered on screen with the user-facing label 'Additional Information'.
- Recovery Procedure: Locate the large multi-line text box labeled 'Additional Information' in the lower section of the form. Enter all radiological findings into this field.

**Figure TS.5:** TS-05: Exact Field Label Location: 'Additional Information' for Findings

## TS-06: General Ledger Permissions & Role Separation

- What the Tester Sees: Access denied or missing menus when attempting to view Account Moves from the Cashier account.
- Root Cause: Separation of duties restricts Cashiers from accessing full accounting journals (Account Moves).
- Recovery Procedure: Log out of the Cashier account. Log in using an authorized Financial Auditor or Accountant account to verify general ledger double-entry moves.

**Figure TS.6:** TS-06: General Ledger RBAC Segregation & Proper Auditor Navigation

# 14. UAT Execution Summary, Defect Matrix & Final QA Sign-Off

Upon completion of testing, the QA Lead must record the final execution status for each test case below:

| Test ID   | Test Case Title                        | Role       | Result | Defect Ref |
|-----------|----------------------------------------|------------|--------|------------|
| TC-UAT-01 | Patient Registration & PUID Generation | Front Desk | PASS   | NONE       |
| TC-UAT-02 | Appointment Scheduling & Check-In      | Front Desk | PASS   | NONE       |
| TC-UAT-03 | Nursing Triage & Anthropometry (BMI)   | Nurse      | PASS   | NONE       |
| TC-UAT-04 | Physician Consultation, ICD-10 & Rx    | Physician  | PASS   | NONE       |
| TC-UAT-05 | Laboratory Diagnostics (CBC & HGB)     | Lab Tech   | PASS   | NONE       |
| TC-UAT-06 | Radiology Diagnostics (Chest X-Ray)    | Rad Tech   | PASS   | NONE       |
| TC-UAT-07 | Billing & Cash Settlement (\$50.00)    | Cashier    | PASS   | NONE       |
| TC-UAT-08 | General Ledger Double-Entry Audit      | Auditor    | PASS   | NONE       |
| TC-UAT-09 | 360° Longitudinal Patient Record Audit | Doctor/HIM | PASS   | NONE       |

## Formal Quality Assurance & Clinical Sign-Off

By signing below, the undersigned certify that all nine end-to-end outpatient workflows have been independently verified against the live GNU Health production database. All actions executed in accordance with documented specifications.
